#### De Block liet miljoenen mondmaskers vernietigen zonder te controleren of ze nog bruikbaar waren

Beeld Getty Images

Voormalig minister van Volksgezondheid Maggie De Block (Open Vld) heeft miljoenen mondmaskers laten vernietigen, zonder te controleren of ze nog goed waren. Dat blijkt uit onderzoek in het VRT-magazine Pano.

#### La Libre

Maggie De Block a fait détruire des masques "de manière irréfléchie", ils auraient pu sauver des vies lors de la première vague de coronavirus

#### Belga Publié le 07-10-2020 à 17h43 - Mis à jour le 09-10-2020 à 10h01

L'ancienne ministre de la santé Maggie De Block (Open VId) a fait détruire des millions de masques buccaux sans vérifier s'ils étaient encore bons, selon une enquête du magazine Pano (VRT) diffusée mercredi qui révèle que les restes de ce stock sont toujours en excellent état. D'après les experts, les masques ainsi détruits auraient pu sauver des vies lors de la première vague de l'épidémie de coronavirus. En 2006, le gouvernement

# **Purpose, Context and Definitions**

## Definitions ISO 31000: Risk Management - Guidelines

Risk: effect of uncertainty on objectives

Effect: deviation from the

expected

Threat or Risk

(Negative Risk)

Risk Management: Coordinated activities to direct and control an organization with

regard to risk

## Why Risk Management?

## Why Risk Management?

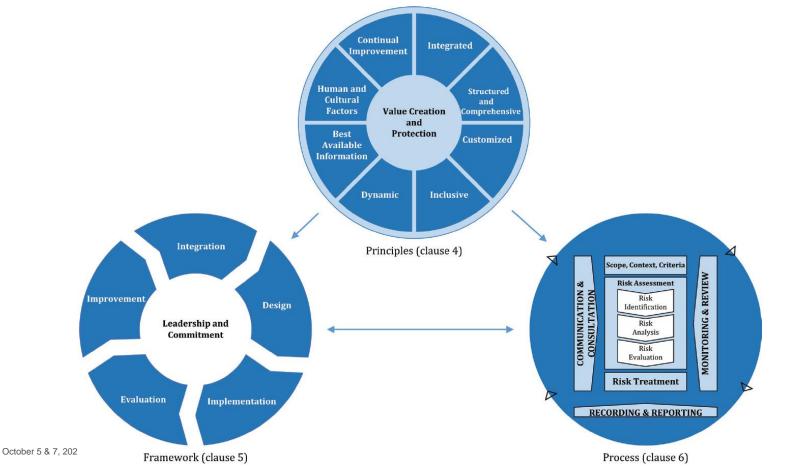

## **Project Risk Management**

#### The PMBOK's 10 Knowledge areas by the Project Management Institute

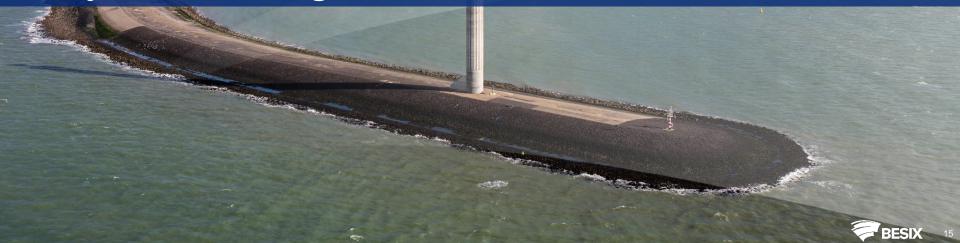

## ISO 31000: Risk Management - Guidelines

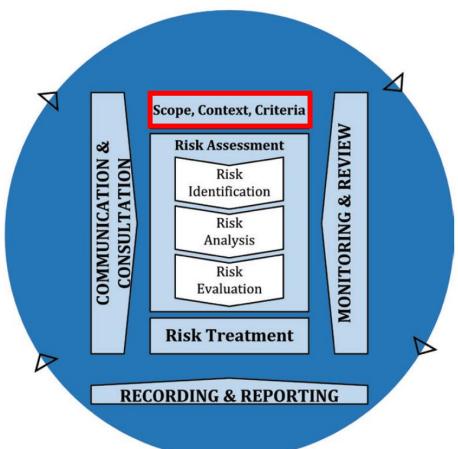

# **Project Risk Management**

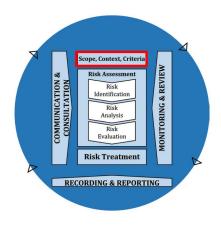

## **Risk Management Process**

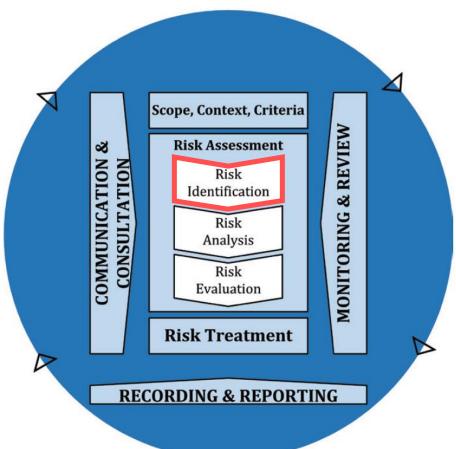

## Risk Management Process Scope, Context, Criteria

- Who are the stakeholders?
- What are their interests and objectives?
- What is the scope?
- What do we want to reach with the risk management?

## **Risk Management Process**

#### Risk Management Process Risk Identification

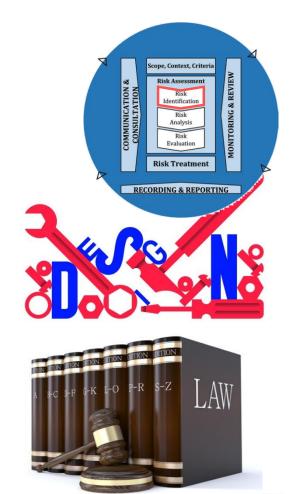

#### **Ground Conditions**

#### Risk Management Process Risk Identification

• Process of **finding**, **recognizing** and **describing** the risk

Event

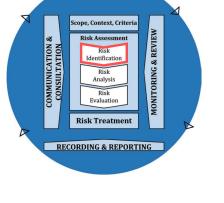

- Because of cause X, it may that risk Y occurs, and have an impact Z on the objectives
- Example:

Cause

 Cause: We are contractually responsible to treat polluted soil at a fixed price. The site hosted industrial activity in the past. A non-exhaustive soil survey was shared by the client.

Consequences

- Risk: Encounter more or other soil pollution than budgeted and planned.
- Consequence: Cost & Time for additional soil treatment. Hazard for workers.

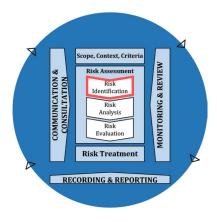

#### Risk Management Process Risk Identification

- How risks can be identified:
  - General brainstorming session with tender/project team
  - Checklist(s) used as support for risk identification
  - Interviews with specialists
  - Lessons learned from past projects

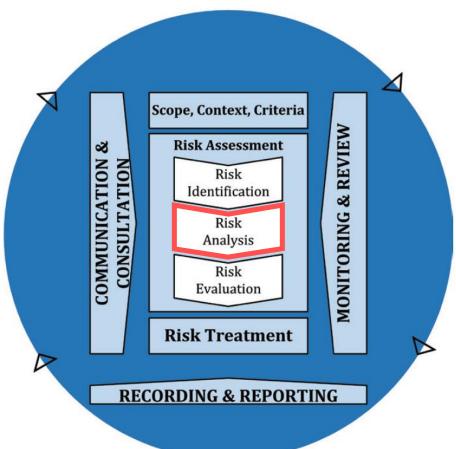

## **Risk Management Process**

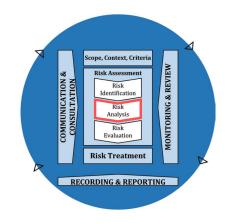

### Risk Management Process Risk Analysis

• **Purpose**: Prioritize the risks

→ High risks deserve more attention

#### Several risk analysis methods exist:

- Qualitative risk analysis
- Quantitative risk analysis

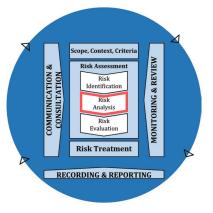

#### Risk Management Process Qualitative Analysis

- The risks are analysed on their likelihood of occurring and possible impact in case of occurrence:
  - → Level of Risk = Combination of Likelihood and Impact
- Typical impact types :
  - Economic
  - Time

. . .

- Quality & Conformity
- Health & Safety
- Reputation

#### Risk Management Process Qualitative Analysis

#### • Likelihood Criteria example:

| Illustrative Likelihood Scale |                           |  |  |  |
|-------------------------------|---------------------------|--|--|--|
| Rating                        | Probability<br>Descriptor | Definition   |  |  |
| 5                             | Almost<br>certain         | 90% or greater chance of<br>occurrence over life of asset or project |  |  |
| 4                             | Likely                    | 65% up to 90% chance of occurrence<br>over life of asset or project  |  |  |
| 3                             | Possible                  | 35% up to 65% chance of occurrence<br>over life of asset or project  |  |  |
| 2                             | Unlikely                  | 10% up to 35% chance of occurrence<br>over life of asset or project  |  |  |
| 1                             | Rare                      | <10% chance of occurrence over life<br>of asset or project           |  |  |

Scope, Context, Criteria Risk Assessment Risk Vises Risk Risk

|                        | Unlikely 2       |                                |       |          | Additional s      |      |  |
|                        | Rare 1           |                                |       |          | Add               |      |  |

#### Risk Management Process Quantitative Analysis

- Purpose:
  - Prioritize the risks
    - → High risks deserve more attention
  - Numerically analyse the effect of the risks
    - To calculate the risk budget or time contingency
    - To track the evolution of the risk exposure throughout the project

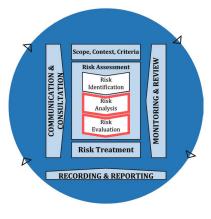

#### Risk Management Process Quantitative Analysis

#### Several techniques / tools:

- **Three Point Estimate / Scenario analysis** a technique that uses the optimistic, most likely, and pessimistic values to determine the best estimate.
- Decision Tree Analysis a diagram that shows the implications of choosing one or other alternatives.
- Expected Monetary Value (EMV) a method used to establish the contingency reserves for a project budget and schedule.
- Monte Carlo Analysis a technique that uses probability and optimistic, most likely, and pessimistic estimates to determine the total project cost and project completion dates. For example, we could estimate the probability of completing a project at a cost of \$20M. Or what is a company wanted to have an 80% probability of achieving its cost objectives. What is the cost to achieve 80%?
- Sensitivity Analysis a technique used to determine which risks have the greatest impact on a project.

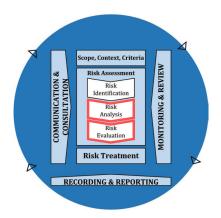

. . .

#### Risk Management Process Quantitative Analysis

Expected Monetary Value

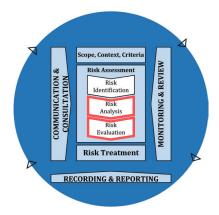

| Risk          | Probability  | Cost Impact | EMV      |
|---------------|--------------|-------------|----------|
| Risk 1        | 15%          | € 75 000    | € 11 250 |
| Risk 2        | 30% <b>X</b> | €150 000    | € 45 000 |
| Opportunity 3 | 25%          | € -55 000   | €-13 750 |
| Total EMV     |              |             | € 42 500 |

#### Risk Management Process Quantitative Cost Risk Analysis

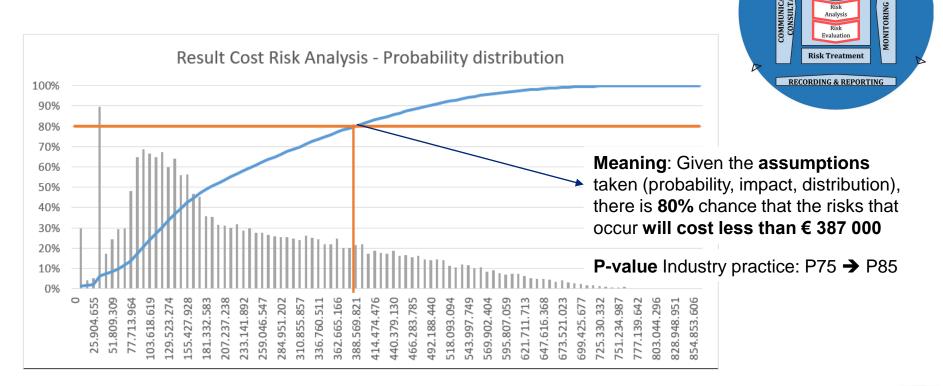

Monte Carlo analysis

| Risk   | Probability | Optimistic<br>Cost Impact | Most likely<br>Cost Impact | Pessimistic<br>Cost Impact |
|--------|-------------|---------------------------|----------------------------|----------------------------|
| Risk 1 | 15%         | € 50 000                  | € 75 000                   | € 150 000                  |
| Risk 2 | 50%         | € 0                       | € 150 000                  | € 600 000                  |
| Risk 3 | 25%         | € 5000                    | € 55 000                   | € 60 000                   |
| Risk 4 | 75%         | € 35 000                  | € 50 000                   | € 150 000                  |
| Risk 5 | 75%         | € 25 000                  | € 30 000                   | € 35 000                   |
| Risk 6 | 30%         | € 0                       | € 10 000                   | € 50 000                   |

## Risk Management Process Quantitative Cost Risk Analysis

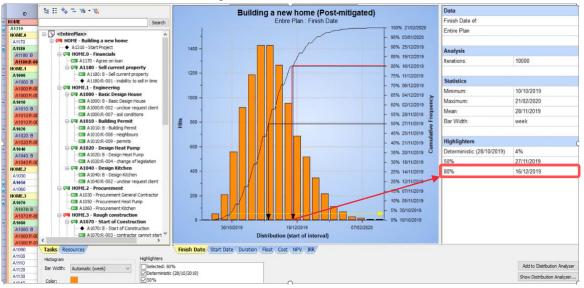

cope, Context, Criteria

Risk Assessment Risk Identification REVIEW

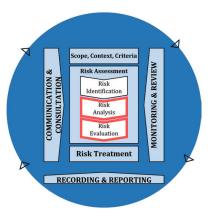

8

#### Risk Management Process Quantitative Schedule Risk Analysis

Monte Carlo analysis on schedule

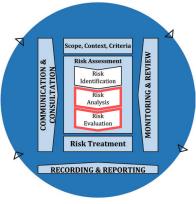

**Meaning**: Given the **assumptions** taken (probability, impact, distribution), there is **80%** chance that the project will be finished before 16/12/2019

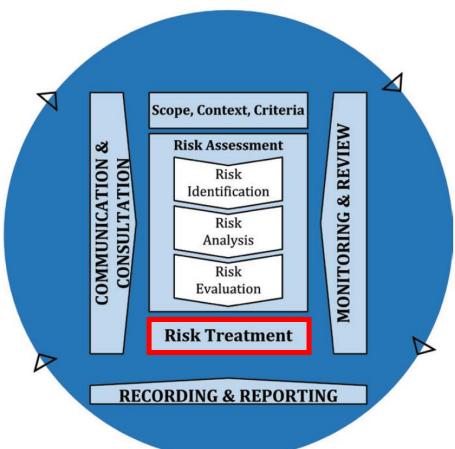

#### Risk Management Process Qualitative vs. Quantitative Analysis

| Qualitative                     | Quantitative                       |  |
|---------------------------------|------------------------------------|--|
| Faster and easier to understand | More complex                       |  |
| Simple tooling                  | Advanced tooling                   |  |
| More subjective outcome         | Outcome more precise and accurate  |  |
|                                 | <u>but</u> garbage in, garbage out |  |

Т

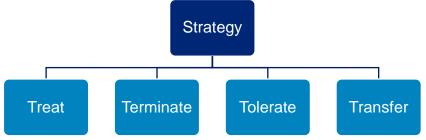

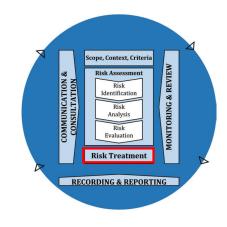

#### **Risk Management Process Treatment - Response Strategies**

- Determination of the best attitude to adopt for each risk
  - Strategy Treat Terminate **Tolerate** Transfer
  - Treat / Reduce: we accept to take the risk as a part of our responsibility as a contractor, and decide to proactively **foresee treatment measures** in order to lower the risk
  - Terminate / Avoid: we refuse to take the ownership of the threat -> gualification in our offer / negotiation
  - Tolerate / Accept: we accept to take the risk as a part of our responsibility as a contractor, but we do not foresee treatment measures as we judge the risk as being acceptable -> for low to very low risks
  - Transfer: we re-allocate the risk to someone else typically insurance, subcontractor, ...

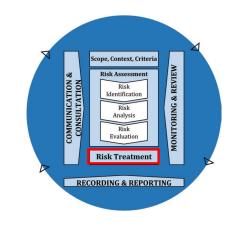

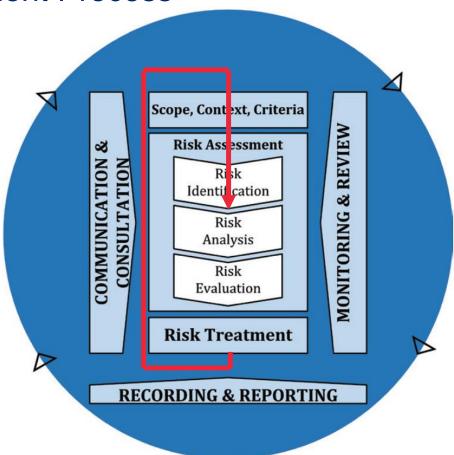

#### Risk Management Process Treatment Plan

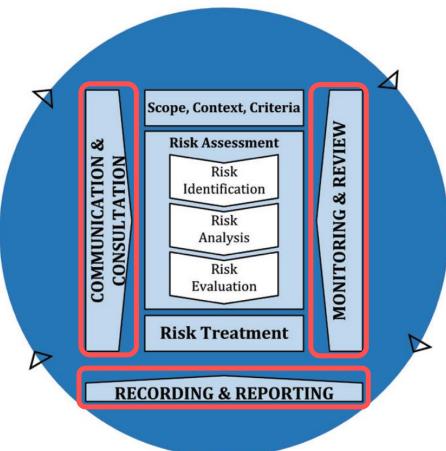

- Define a risk owner → person within project team with responsibility to manage the risk
- Define preventive and/or mitigation measures to lower the likelihood and/or impact
- Define the action owner and target date 
  person/company responsible to
  perform the measure
- Analyse the effectiveness of the measure by evaluating the expected residual risk

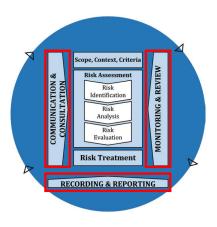

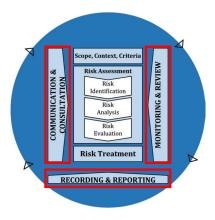

- Communication and consultation:
  - Promote awareness of risk analysis
  - Seek for feedback and information in decision making
- Monitoring and review:
  - Is the risk management effective?
  - When do we plan risk review activities?
  - At tender stage? And during project execution?
  - Who should be involved?

- Recording and reporting:
  - Record the risks management → typically in a risk register
  - Periodically report the risks
    - Top risks, new risks, closed risks
    - Are the foreseen measures taken on time?
    - Are the measures as effective as intended?
    - How does the overall risk exposure evolves?
    - Do some risks need to be escalated?
    - Internally? Externally?

## Risk Register Example

|                                      |          |                                     | 2. QUALITATIVE RISK ANALYSIS BEFORE TREATMENT   |  |   |                     |   |          |   |    |                       |   |      |               |                |   |            |   |    |    |

# What's in it for me?

- At tender stage:
  - Better and faster understanding of the major risks of the project
  - Opening of discussion with the different stakeholders about risk allocation at an early stage
  - Correct pricing and scheduling of the risk treatment measures and the residual risk
- During project execution:
  - Better **awareness** of risk through the entire **project team** → better decisions
  - More pro-active and preventive approach, less 'firefighting'
  - Reduce the failure costs and deliver on time

### Tips to get started

- **Start simple** and further develop as the risk maturity of your company grows
  - E.g. start by listing top risks for every tender / project
- **Appoint someone** to formalize and implement the risks management process
- **Customize the process** to the type of project / activity
- Focus on risks that matter → 10 well managed top risks are better than 100 unmanaged ones
- Foresee **key moments** to reflect on risks. E.g.:
  - at tender stage: when starting the tender, at 50% progress and before submitting binding offer
  - during execution: foresee a monthly risk review meeting with key project members

# Un rapport de l'OMS, auquel Maggie De Block a participé, met en garde sur une "nouvelle pandémie"

Il y a environ un an, un groupe d'experts de la santé avait été formé par l'OMS afin d'analyser la gestion de la pandémie de coronavirus par les différents gouvernements européens. L'objectif était de tirer des leçons afin d'éviter les mêmes erreurs que par le passé. Ce vendredi, Het Laatste Nieuws révèle leurs conclusions dans un rapport catégorique: "il n'y avait aucune excuse pour ces échecs."

Maggie De Block schreef mee aan nieuw WHO-rapport: 'Dat er een nieuwe pandemie komt, is zeker'

Een werkgroep van de WHO heeft een rapport geschreven over de lessen die de wereld moet trekken uit de coronapandemie. Voor ons land nam voormalig minister van Volksgezondheid Maggie De Block deel. Zij vindt dat er – zowel op Europees als Belgisch niveau – beter samengewerkt moet worden, al viel het met die fouten tijdens het afgelopen anderhalf jaar volgens De Block best mee.
